

STOCKPILE REPORTS

Measure Inventory
from Imagery

Binmaster brings precision and reliability to measuring and monitoring volume and tonnage in free standing stockpiles. Replace outdated guesswork, inventory write-offs, and bad valuations while saving hours of time and hassle. Stockpile Reports automates pile measurement using pictures from a cell phone, drone, plane, or fixed camera.

Pile Monitoring Made Safer & More Reliable

Eliminate climbing and visual inspections with photographs taken from the ground or the air, depending on location and pile size. Advanced processing—driven by three powerful patents—drives 10 automated sensing features and delivers 8 key metrics for every stockpile.

It's this simple.

You snap and upload images. We do the rest.

Evolutionize Pile Management

Inventory Monitoring

Vital information on the volume, tonnage, and condition risks for each pile

Production Management

Monthly, weekly, or even daily reporting to track and plan production

Financial Validation

Timely, precise, and reliable data for inventory valuation and financial reporting

One Digitized Dashboard

1

Detects and identifies piles with vegetation, equipment, obstructions, standing water, debris, or snow that could impact measurement reliability.

3

Visually maps each site, pinpointing the location of each pile with one-click access to details on each pile.

2

Alerts to confirm new piles, inventory or flight requests, and unverified measurements.

4

Manage inventory by products, piles, and last measurement date and call out required actions.

5

Reports easily download to Excel or PDF for sharing and integrating with other business systems.

Effortless Full-Service Subscriptions

Reliable: Online service requires no special hardware

Scalable: Subscriptions for 5 to more than 500 piles

Versatile: The only system that works from ground or air cameras

Smart: Auto detects new piles, alerts to obstructions and conditions

You pile it. We measure it.
