Rotary Evolution

BinMaster: Building a Better Mouse Trap

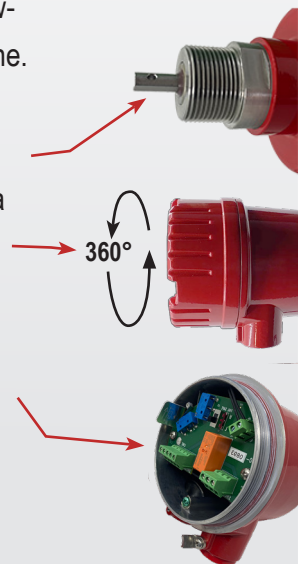

BinMaster has consistently led the industry with innovative features like our de-energizing motor and true fail-safe unit with diagnostics. We're always striving to enhance our products, and in that spirit, we're excited to introduce our new line of Rotary Paddle Level Indicators!

What's new?

For many customers, the only noticeable change will be the color. These new units maintain the same mounting, wiring, and accessory compatibility as our previous models. However, this new design enables us to offer better configurations across our rotary paddle line.

Enhanced features

- > **Adjustable Power Pack:** The power pack now spins 270 degrees once the threads bottom out, allowing you to position the unit with the conduit entry facing down, creating a drip loop to prevent moisture ingress.
- > **Surface-Mount Electronics:** These are more resistant to vibration compared to through-hole mounts.
- > **Process Connection Fittings:** Standard aluminum or durable, corrosion-resistant, sanitary food-grade stainless steel with 1 ¼" or 1 ½" threads will be available.

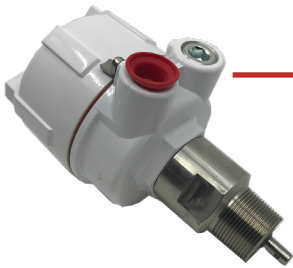

Introducing Next-Gen BinMaster Rotaries

<BMR-100 is now BMRX-100>

Our most economical unit, the BMRX-100, uses purely mechanical components with two microswitches to indicate a covered condition—no electronics involved.

<BMRX is now BMRX-200>

Our most popular unit, the BMRX-200, features fail-safe relays that alert you to a loss of power, ensuring reliable operation.

<Maxima+ is now BMRX-300>

Our premium unit, the BMRX-300, offers true fail-safe protection by monitoring shaft rotation to alert you of motor or other failures in addition to power loss. The new light ring allows you to see the unit's status even in dusty environments.

All units are now available in **explosion-proof certified and general-purpose models**, with more mounting options and configurations than ever before.
