Monitor inventory in bins, tanks, or silos and organize it in one place with BinCloud®. Level sensors do away with climbing vessels and manual measurements while the software does away with complicated spreadsheets. BinCloud® is a web-based application that lets you view current inventory levels, place orders, and generate reports. New features released in BinCloud® V1.3 make inventory management evermore easier, intuitive, and convenient.

Frustrated by supply chain issues and looking for a better, faster way to get the data you need? Get a demo and see how BinCloud® can transform how silo inventory.

> **Mobile-friendly QuickViews.** Optimized data displays reorganize content to fit smaller screens and are easily customized to show just the data users need.
> **Manage truckspace easily.** Purchasers, drivers, and dispatchers can view how many truckloads will fit into a vessel or the number of truckloads available to take out. Improve purchasing, scheduling and reduce overfilling.
> **View data over multiple sites.** Simply open a dropdown to review a specific site. It is quick and easy to cycle through your sites or select all sites to see them all at once.
> **Create automated alerts.** A simple step-by-step process walks users through set up of high and low-level alerts. New alert types notify users if a sensor has skipped readings, a gateway is inactive, or status has changed for a vessel or group of vessels.
> **Customized user experience.** A new dropdown toolbar allows users to filter by keyword, access export features, select and deselect columns to display and adjust table settings back to a default state.

INVENTORY QUICKVIEWS, TRUCKLOADS

Inventory management with BinCloud
